

SUPER-POWER AMPLIFIER

● Named the DC300, this stereo amplifier will produce 300 watts sustained power from each channel at 4 ohms. With 70% efficiency at full power, there is little heat produced. The specifications that follow are all based on continuous commercial service: True direct-coupled design; i.n.s. distortion under 0.05% from 1/100 of a watt to 300 watts, harmonic distortion under 0.02%; phase error less than 10° at 10 kHz; output ± 50 V or 35 V r.m.s.; 300 watt sustained power from d.c. to 20,000 Hz; s/n is 100 dB; guaranteed short- and mismatch-proof, no thumps at turn on. The amplifier is considered suitable as a driver for any kind of transducer needing high power at low distortion.
