

# FAIRCHILD TURRET-HEAD ARM HOLDS 3 CARTRIDGES IN 1 ARM

Eliminates need  
for plug-in cartridges

Eliminates need  
for extra arms

Provides new,  
improved performance

**Fairchild**, pioneer developer of the famed Turret-Head 3-Way Transcription Arm, now offers a highly improved version incorporating viscous damping in the lateral plane only. This means elimination of sluggishness, proper tracking of warped records and increased overall performance. A bi-metal unit is used to automatically insure proper lateral damping regardless of wide temperature variations.

*Here are some of the excellent design features that make the Fairchild Model 202 Turret-Head Arm the finest professional arm of its type.*

- Use of Precision Gyroscope bearings insensitive to dust and dirt.
- Shortened overall length for mounting convenience.
- New type of arm suspension eliminates arm cocking laterally.
- Freedom from arm resonance and resulting distortion.
- Optimum groove tangency for perfect tracking.
- Automatic temperature control of viscous damping action.
- Automatic stylus pressure adjustment as cartridge is selected.

The new Fairchild Model 202 Arm fits all transcription tables and provides a range of height adjustment for best positioning. By using a new, simple spring counterbalancing system, the vertical stylus force remains constant over a relatively wide range of arm height.

The outstanding Fairchild Series 220 High Compliance Cartridges plus the new Turret-Head Arm offer the finest playback combination for professional as well as advanced home music systems.

The **Turret-Head Arm** mounts up to three Fairchild Series 220 High Compliance Cartridges. Merely turning the knob on the end of the arm will rotate the desired cartridge into playing position. *At the same time*, stylus pressure is automatically changed for standard or microgroove, as required. This rapid, sure-fire method eliminates the need for extra loose cartridges, two or more pick-up arms and switches and makes confusing turntable installations a thing of the past. Lateral, vertical and microgroove cartridges in any combination can be used in the Turret Head.

## SPECIFICATIONS

### Arm Dimensions (overall):

Stylus to center of base  $11 \frac{1}{8}$ "  
Overall length 16"  
Height above record surface  $1 \frac{7}{8}$ "  
Range of height adjustment  $\frac{3}{4}$ "

### Arm Mounting Dimensions:

Center pin of turntable to  
center of arm base  $10 \frac{11}{16}$ "  
Base diameter  $3 \frac{1}{4}$ "  
Mounting screws required: three— $\frac{8}{32}$   
Mounting screws spaced on  $1\text{-}3/32$ " radius

**Arm Weight (total):** 17 ounces

### Stylus Pressure:

Adjustable. Factory set for 15 grams, 2 positions;  
6 grams microgroove.

Model 202 Turret-Head Arm . . . \$75.00

# FAIRCHILD TURRET-HEAD ARM HOLDS 3 CARTRIDGES IN 1 ARM

Eliminates need  
for plug-in cartridges

Eliminates need  
for extra arms

Provides new  
operational performance

The Fairchild Model 203 Turret-Head Arm is a revolutionary new recording arm that holds three cartridges in one arm. This unique design allows for simultaneous recording on three channels, providing a significant increase in recording efficiency. The arm is constructed from high-strength materials to ensure precise tracking and accurate reproduction of the recorded signals. Its compact size makes it ideal for use in professional recording studios and broadcast facilities.

The Fairchild Model 203 Turret-Head Arm offers a high level of performance and reliability. Its advanced design eliminates the need for multiple arms and plug-in cartridges, resulting in a cleaner, more organized recording environment. The arm's precise tracking capabilities ensure that each channel is recorded accurately, providing excellent reproduction quality. This makes the Model 203 an essential piece of equipment for any professional recording studio.

Here are some of the excellent features that make the Fairchild Model 203 Turret-Head Arm the most professional arm of its type:

- The Model 203 Turret-Head Arm is designed to hold three cartridges simultaneously, providing a significant increase in recording efficiency.
- The arm's precise tracking capabilities ensure accurate reproduction of the recorded signals.
- The compact size of the Model 203 makes it ideal for use in professional recording studios and broadcast facilities.
- The arm is constructed from high-strength materials to ensure precise tracking and accurate reproduction.
- The Model 203 Turret-Head Arm is a revolutionary new recording arm that holds three cartridges in one arm.

The new Fairchild Model 203 Arm has all the features of a turret and provides a range of height adjustment for best positioning. Its new, rigid spring counterbalancing system, the vertical stylus force remains constant over a relatively wide range of arm height.

The outstanding Fairchild Series 203 High-Capacity Cartridge plus the new Turret-Head Arm offer the finest playback combination for professional as well as advanced home music systems.

## 7 SPECIFICATIONS

- 1. Arm weight (total): 17 ounces
- 2. Stylus pressure
- 3. Adjustable cartridge set for 15 grams, 3 positions
- 4. 0 gram microphone
- 5. Maximum frequency response: 15,000 cps
- 6. Minimum frequency response: 20 cps
- 7. Total weight (including base): 3.5 lbs.

Model 203 Turret-Head Arm \$150.00
